

Exhibit Summary

Picture A shows a wastewater impoundment with excessive manure solids. This picture was taken at a dairy facility with a manure solids settling separator. Wastewater flows from the parlor through the separator, to the pictured wastewater impoundment, prior to being land applied. [Desertland Dairy, DP-260, 11/01/05]

Picture B shows a wastewater impoundment with excessive manure solids. This picture was taken at a dairy facility with a single, concrete manure solids settling separator. Wastewater flows from the parlor through the separator and is pumped to the pictured wastewater impoundment, prior to being land applied. [Faria Dairy, DP-923, 12/15/05]
